□ hollandglenclarke@gmail.com
□ [hgclarke98](#)

□ Education

The Ohio State University

Bachelor of Science in Computer & Information Science

Aug 2016 – Dec 2020

Columbus, OH

□ Experience

Amazon

Software Development Engineer II

Apr 2023 – Apr 2026

San Jose, CA

- Assisted in the development of a new multi-tenant LLM infrastructure for risk assessment and investigations, enabling rapid deployment of AI solutions using internal data, custom prompts, and multiple model providers; delivered \$100M+ in cost savings
- Launched an ad-hoc enforcement tooling platform that resulted in 377.9K seller unapprovals, 482.1K automated notifications, removal of 236.3M listings, and prevention of \$4.6M in counterfeit-related losses.
- Launched a ML-driven pipeline for classifying counterfeit complaints, enabling automated defect sidelining and downstream decisions; improved signal precision to 99% accuracy, migrated monthly offline workflows to a weekly production system, and reduced manual effort by 1,700+ hours annually.
- Built self-service capabilities for TrustGPT via a new UI, allowing internal teams to independently configure and deploy LLM workflows; expanded website to over 100+ users, reduced idea-to-test cycles from weeks to days and accelerated experimentation velocity.
- Developed an automated supplier verification API that reduced investigator manual effort, decreased average handling time by 8% and generated \$1.48M in annual savings.
- Led design and implementation of final-action automation handling 20K cases per week, saving \$554K annually and 4 minutes per case.
- Implemented an ML-driven Decision Optimization Engine, achieving 6× defect detection accuracy, reducing rule complexity from 250+ to 20 rules, cutting actions by 79% while having the same impact, and saving 12 weeks of operational overhead per region annually.

Amazon

Software Development Engineer

Apr 2021 – Apr 2023

San Jose, CA

- Built automation to identify suppliers who were also Amazon sellers and surface key risk signals in guided workflows; reduced AHT by 90 seconds, impacted 53% of appeals volume, and saved \$486K annually.
- Fixed bugs in an automated workflow preventing accurate item capture during seller appeals, saving 40 seconds per investigation and \$120K annually.
- Rebuilt manual action workflows into unified automated systems, reducing false positives by 5%, decreasing seller escalations by 80%, and improving investigator efficiency.
- Implemented client and server-side validation to mitigate multiple medium-to-high severity security risks identified by during security certification process.
- Migrated multiple legacy systems to modern architectures, reducing deployment time, simplifying testing, and significantly lowering technical debt.

□ Skills

Languages Java, Python, Swift, Javascript, Typescript, Ruby, SQL, Dart, Go

Frameworks React, Spring Boot, LangChain, Flutter, iOS, FastAPI

Cloud & Infra AWS, Redis, Firebase, PostgreSQL, DuckDB, Supabase, Vercel, Render, Resend

Testing JUnit, Mockito, TestNG, Pytest

AI Tools Claude, Cursor
